STEERING STABILIZERS

A horizontal shock absorber tghat helps to stabilize the steering system. The kit also helps to in the prevention of the steering wheel from suddenly jerking as a result of hitting a pothole or object in your path. These kits will also reduce wear on vital suspension parts hence making tires last longer.

RemanufacturedAxels

AXELS

Feature 2" steel seamless tubing with CNC machined ends, laser cut and CNC bent spring pads. Each Axle has been manufactured to precise tolerances which gives a fit and finish above and beyond the competition making these the finest axles on the market today. This is absolutely the best idea in years, these axles lower your truck 3" while retaining the full stock suspension travel which gives your truck the ride quality and safe handling it was meant to have. By using these axles to lower your truck you eliminate the problem of insufficient suspension travel associated with lowered springs. These axles can be used with modified springs to give more than a 3" drop.

IFS KITS

All kits include manual rack & pinion, new spindles, springs, shocks, polished stainless control arms, and ECI upgraded iron disc 11" brakes. Add \$100 for a power rack & pinion and \$70 to cover the rack main shaft extension.

PART #	DESCRIPTION	YEAR	SERIES	RETAIL	NOTES
SU-0358	IFS - Stage I - Hub to Hub Kit	48-64	F100, F250	1779.95	A
SU-0359	IFS - Stage II - Hub to Hub Kit - by far the most popular	48-64	F100, F250	1884.95	B

SU-0361	IFS - Stage IV - Hub to Hub Kit	48-64	F100, F250	2199.95	D
SU-0362	IFS - Stage V - Hub to Hub Kit	48-64	F100, F250	2724.95	E

A - Uses stock type stamped control arms with strut rods, standard springs, and shocks
B - For \$100 more than the Stage I Kit, you get Polished Stainless Steel Control arms which eliminate the strut rod by straddling the crossmember for stability.

C - Stage III adds chrome Carrera coilovers to the polished stainless steel arms. A shim system is used for ease of alignment.

D - Stage IV uses Firestone Airsprings which are built so strong that they act as their own bumpstop. The shock is mounted to the rear of the suspension. Compressor systems and rear air suspensions are available and vary according to your application and budget.

We use Air Ride Technologies and can help you build a complete system

E - Stage V is an upgrade of Stage III style to Air Ride Shockwaves. Air suspensions work best to maintain ride height as the total load changes. Always return vehicle to normal ride height for driving. Driving lowered or raised will cause unusual wear on tires, ball joints, and other items. Sway bars are not recommended for the front when an air suspension is being used. Using rear sway bars only will control the body roll effectively.
