A - Designed to be installed right in your battery cable. Extra heavy duty. Protects against theft and electrical failures. Install under your hood, seat, on the firewall, or at the rear of the car. Rubber insulator boots cover stud and nut for the extra touch of class.

B - This high temperature, cross-link cable is far superior to auto parts store and welding cable. With a temperature rating of 255°F (125°C), (Under Hood Temperature Varies from 100°C to 115°C) this flexible cable has less voltage drop and more current carrying capacity. The molded-in, steel reinforcing clip helps keep the lug from straying 'out of round', thus insuring a gas-tight seal and resisting corrosion. The color coded rubber protective boots further clean up your installation for a neat engine compartment. Includes 20' Positive Cable & 15' Negative Cable. All battery cables come with a crimping tool, extra lugs and shrink tubing.
